(54) Title: DISPENSER/SPREADER ARTICLE FOR SPACKLING AND PASTE

(57) Abstract: A spreader includes a first and second preformed components of resilient PVC sheet and deformable PVC sheet, respectively, bonded together and shaped to form a blister-shaped sealed container filled with spackling material or paste. The resilient sheet forms an enlarged blade suitable for spreading the spackling material and forms an opening at the one end for dispensing the spackling material onto the blade and includes ribs to stiffen the blade. A hole in the other end forms a docking station. A resilient plug fits in the opening to seal the opening to maintain the spackling material for later use, and is repositionable into the docking station for holding the plug while using the spreader.

The container is suitably sized for grasping and manipulating the blade while dispensing material.
